MISSED + VOICEMAIL

3.6m

AVG TALK TIME (ANSWERED)

Bottom line: yes — you need more coverage, but schedule and routing matter more than headcount alone.

About 1 in 8 inbound callers do not reach a person. Misses are not spread evenly: they spike at **4–5pm PT**, on **Fridays**, and on extensions that ring with almost no answers. Peak bursts need about **9 concurrent agents** in a 15-minute window. Long calls (median 2.2 minutes, average 3.6 minutes) tie people up during morning and mid-afternoon rushes.

1. Where calls are lost

Voicemail is a miss from the patient's perspective. Those 433 calls are part of the access problem, not a separate “handled” bucket.

Outcome	Count	Share
Answered	6,864	87.5%
Missed / no answer	549	7.0%
Voicemail	433	5.5%

By time segment

Segment	Offered	Miss + VM rate
Business hours (Mon–Fri 8:00–16:59 PT)	7,206	11.9%
After hours / edges	640	19.8%
5pm hour (Mon–Fri)	237	26.2%
Weekend	104	23.1%

2. Hour-of-day pattern (weekdays)

Morning (9–11am) has the highest volume (~53–61 calls per weekday) with about a 10–12% miss rate. Afternoon 4–5pm is the danger zone: volume is still high at 4pm, then the miss rate jumps to 26% at 5pm as staffing thins out.

Hour (PT)	Calls / weekday	Miss + VM rate	Agents needed (p90)
7:00	6.2	12.0%	1.6
8:00	34.8	13.1%	3.8
9:00	52.6	11.8%	5.7

Hour (PT)	Calls / weekday	Miss + VM rate	Agents needed (p90)
10:00	61.0	9.7%	7.5
11:00	56.1	10.6%	6.4
12:00	47.5	11.8%	6.2
13:00	49.9	12.2%	5.7
14:00	51.1	10.4%	6.0
15:00	50.1	10.7%	5.8
16:00	47.3	17.8%	6.0
17:00	14.8	26.2%	2.1
18:00	3.5	17.9%	1.6

Agent need is estimated from answered-call talk overlap in 15-minute slots, assuming 80% occupancy. Peak observed load: 8.8 concurrent agents in one 15-minute window (Aug 11, 10:45am PT).

3. Day-of-week pattern

Day	Offered	Missed + VM	Miss rate
Monday	1,469	182	12.4%
Tuesday	1,841	227	12.3%
Wednesday	1,681	195	11.6%
Thursday	1,425	145	10.2%
Friday	1,326	209	15.8%
Saturday	74	18	24.3%
Sunday	30	6	20.0%

Friday is the worst weekday (15.8% vs 10.2% on Thursday). Saturday's 24% miss rate on low volume is consistent with no coverage, not overload.

Worst single windows: Friday 5pm (47% miss), Thursday 5pm (35%), Friday 4pm (34%), Monday 8am (26%).

4. Do you need more people?

Yes — but scheduling and routing matter as much as headcount. Peak demand hits about 9 concurrent agents in a 15-minute burst. When the 5pm hour still has ~15 calls per weekday but only ~20 people picking up (vs ~40 at 9am), misses spike.

Window	Add / shift	Why
Core peak (Mon–Fri 9am–12pm)	6–8 dedicated inbound agents	Highest burst load: ~7.5 concurrent agents needed at 10am; ~56 inbound calls/day in this block.
Afternoon surge (Mon–Fri 3–5pm)	+2 agents vs morning baseline	4pm miss rate jumps to 18%; 5pm hits 26% as volume drops but staff leaves first.

Window	Add / shift	Why
Close extension (Mon–Fri until 5:30pm)	1 agent stays 30 min past last pickup	62 misses in the 5pm hour alone — mostly rollover + voicemail as desks go dark.
Saturday (optional)	1 half-day agent 9am–1pm	24% miss rate on low volume (74 calls / 3 weeks) — likely no coverage, not overload.

That is roughly **+2 FTE** if split across shifts, or shift changes (not necessarily new hires) if you redeploy existing front-desk staff into dedicated phone blocks.

5. Routing issues (fix before hiring)

A large share of misses land on extensions that almost never answer — likely hunt-group members or lines that ring when nobody is staffed.

Destination	Missed	Miss rate
Erick Avendano · ext 1102	125	94.7%
Mia Lopez · ext 1100	102	39.2%
Dayana Flores · ext 2100	89	51.7%
Check In Out Henderson · ext 4100	54	24.2%
Melanie Perez · ext 5102	38	100%

Erick Avendano (1102) had 125 misses and 0 answered. Melanie Perez (5102) had 38 misses and 0 answered. Trimming unavailable extensions from ring groups can cut misses without adding headcount.

177 repeat misers: 422 unique caller numbers hit a miss or voicemail at least once; 177 of them missed 2+ times in this window. That points to callback backlog and patients calling back into the same overloaded windows.

6. Quick wins this week

- Extend official phone coverage to **5:30pm PT** on weekdays.
- Audit hunt groups — remove extensions that never answer (1102, 5102, queue stubs).
- Staff Friday afternoons like a peak day, not a wind-down.
- Block 9–11am and 3–4pm as dedicated phone time for 6–8 people (not multitasking check-in / back office during bursts).
- Treat voicemail rate as part of access, not a separate success metric.

7. Method notes

- Source: Vonage Business Communications Reports API, inbound CDRs only (direction = Inbound).
- Window: 2026-07-30 00:57 UTC through 2026-08-20 00:41 UTC (Pacific local times used for hour/day grouping).
- “Missed” here means any inbound result other than Answered/Connected — mainly Vonage results Missed and Voicemail.
- Staffing estimates use talk-time overlap of answered inbound calls in 15-minute slots, then p90 load / 0.80 occupancy. Ring/queue wait is not in VBC Reports CDRs, so true ASA / service level is not available.
- Destination names come from Vonage CDR destination user / extension fields. Phone numbers are omitted.
